How to install web2py ?

- Install web2py software from the link <http://www.web2py.com/init/default/download>.
- You should download the source code version for normal users.
- Untar the .tar file.
- Paste the code given in the cd to web2py/applications.
- Now to run the server go to the web2py folder using terminal and type the following command:
python web2py.py
- Then go to the WSD application and your application will start.

Done with installing web2py ?

Now you need to copy the folder(WSD_Tool) provided on the installation drive to ./web2py/applications.

Now type the following command on your terminal

```
python web2py.py
```

A GUI tool for web2py should open. Now set the admin password after which you will be redirected to a link(http://127.0.0.1:port_number/) in the browser.

Here click on administrative tools and enter the admin password.

Next select the application from the list of applications displayed here. You will be redirected to the index page of the application.

Login here.

If you are a new user click on register button and fill out the form you are redirected to.

Next, you will be redirected to the home page of the application.
