Installation Instructions

Type in terminal -

    Install python – " sudo apt-get install python "

    Install mysql – " sudo apt-get install mysql-server mysql-client "

    – In mysql installation the user will be prompted to choose a password for the access .

After the installation of python and mysql -

Copy both ssad.sql file and new.py file to the folder you want the application to reside.

Now in terminal change your directory to the desktop application folder .

Type command "mysql -u root -p < ssad.sql" – imports database in mysql.

Now edit new.py file and enter mysql's username and password indicated in the file.

Now in terminal type - "python new.py" which open's the desktop application .

Note :- Any insertion or updation in the database can be done through mysql.
